

Lê Tôn Anh Tuấn

Software & Platform Engineer | Cross-Layer Engineering
Ho Chi Minh City, Vietnam | tuannleeeee@gmail.com | +84 94 123 7430 | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY

Pragmatic Technical Lead with a "solutions-first, code-later" approach to complex distributed systems. Specialist in cross-layer handling, platform engineering, and high-stakes infrastructure. Proven track record of bridging hardware and software protocols, from embedded autonomous robotics to high-concurrency microservices. Core philosophy: System architecture is the truth; code is the tool.

PROFESSIONAL EXPERIENCE

- Robotics Research Lab** | Binh Duong, Vietnam *Leading Engineer* | Jan 2026 – Present
- Building the foundation for autonomous robots.
 - Architecting and optimizing proprietary robotic control systems and real-time infrastructure (specific system logic and operational metrics are under NDA).
 - Leading the hardware-software integration layer, ensuring high-availability communication between embedded components and centralized control nodes.
- Demo Voting Platform** | Ho Chi Minh City, Vietnam *Backend Lead* | Oct 2025 – Nov 2025
- Designed and implemented a scalable microservices architecture for a voting platform. Implemented heavy caching mechanisms for read-heavy workloads, ensuring low latency and high availability. Achieved up to 1k write RPS on \$40 infrastructure, demonstrating efficient resource utilization and cost-effectiveness. Network constraints (100 Mbps) capped read RPS at 600.
- AWS Vietnam** | Ho Chi Minh City, Vietnam *OJT Internship* | Sep 2025 - Dec 2025
- Learnt about AWS core services, DevOps practices, Cloud Computing characteristics
 - Led a peer team to design and deploy a cloud-native microservice application on AWS, implementing CI/CD pipelines.
- Freelancing Contracts** | Remote *Freelancer* | 2023 – 2025
- Engineered diverse backend services, custom electronics, and embedded systems, delivering cross-layer solutions tailored to strict client constraints (cost, latency, and hardware).

RESEARCH & TECHNICAL PROJECTS

- Fairino Cobot Xiangqi Integration** *Lead Engineer* | Mar 2026 – Present
- Developing an AI-based Chinese chess (Xiangqi) player utilizing Fairino FR3/FR5 cobot arms, involving real-time hardware control, computer vision, kinematics, and software integration.
- Spiritech - E-Commerce & AI Agent Platform** *Technical Lead* | Feb 2026 – Present
- Architecting a standalone e-commerce platform integrated with specialized AI agents.
 - Structuring the backend to handle complex transactional logic and secure third-party service integrations independently from other enterprise ecosystems.
- mein-idaas - Self-Hosted Identity as a Service** *Core Developer* | Dec 2025 – Feb 2026
- Built an IDaaS solution using Go (Fiber) to manage authentication and authorization flows securely and efficiently.
 - Implemented rotational JWT pairs with grace period, IP monitoring, OTP, email verification, and third-party OAuth credential integration.

TECHNICAL EXPERTISE

- Core Languages:** Go, Python, C#, Java, JavaScript, C.
- Frameworks & Tools:** Spring Boot, Fiber, Gin, .NET, Express.js, RestAPI, gRPC, STM32 HAL, Nordic SDK, Git.
- Data & Messaging:** SQL, noSQL, CQL, Redis, Memcached, RabbitMQ, Kafka, Zookeeper.
- Cloud & DevOps:** Kubernetes, Docker, AWS, GCP, Azure, Nginx, Cloudflared.
- Embedded & Hardware:** Embedded systems programming, Electronics, Server maintenance.
- AI/ML:** LLM integration, MCP server development, Prompt engineering, Model quantization, Weight training.

EDUCATION

- FPT University (FPTU)** | Ho Chi Minh City, Vietnam *Bachelor of Science in Software Engineering*
- Focus: Advanced System Architecture, Embedded Infrastructure, and Distributed Computing.

CERTIFICATIONS & AWARDS

- IELTS 7.0** – English Language Proficiency
- Silver Medal** – English Olympic Competition
